CAREER OBJECTIVE

Passionate developer building scalable, production-ready software and enterprise-grade applications with a focus on clean architecture and simplicity. I excel at system design and collaboration to deliver robust, high-impact solutions.

EDUCATION

B.Tech, Artificial Intelligence & Machine Learning 2023 - present
Shri Ramdeobaba College of Engineering and Management

Class 12 HSC 2022 - 2023
ST Paul School Hudkeshwar Nagpur Maharashtra

WORK EXPERIENCE

Android App Developer Oct 2024 - Present
GDG RBU, Nagpur

1. Led **end-to-end development** of a dual-role (member/student) **cross-platform App**, implementing **Google Auth** (using clerk) and **real time notifications** using **Expo-Supabase** stack, overcoming Firebase dependency challenges.
2. **Conceptualized** and built the entire **backend infrastructure from scratch**, including **Docker containers** and **CI/CD pipeline** (GitHub Actions), **reducing time by 60%**.
3. **Optimized development workflow** that enabled delivering the **production-ready app in just 10 days (67% faster** than the 1-month deadline).
4. Solved critical notification system challenge by developing a **custom solution**, ensuring **100% reliable alerts** for both user types with **native Firebase support**.

PROJECTS

Studzee – Full-Stack SaaS Ecosystem [[Github](#)] [[Website](#)] [[Play Store](#)] Oct 2026 - Present

1. Architected and deployed a **multi-platform SaaS ecosystem** comprising a web application, cross-platform mobile app, Electron-based desktop dashboard, and a unified backend, all running on a fully AWS-based cloud infrastructure.
2. Engineered a **centralized backend system** using Node.js and PostgreSQL, designed to serve multiple clients (web, mobile, desktop) through consistent, scalable APIs with a focus on clean architecture and modular design.
3. Designed and implemented a **cloud-native infrastructure on AWS (EC2, S3, containerized services)**, ensuring high availability, fault tolerance, and production-grade scalability across all system components.
4. Built and maintained a **live production environment**, including a publicly accessible website, deployed backend services, and an integrated mobile application with seamless real-time data synchronization.
5. Developed a **desktop admin dashboard using Electron**, enabling centralized monitoring, user management, and operational control over the entire system.
6. Implemented **end-to-end CI/CD pipelines using GitHub Actions**, automating build, test, and deployment processes across all services, significantly reducing manual effort and release time.
7. Optimized performance using **Redis caching and efficient API design**, improving response times and system throughput under concurrent load.
8. Engineered **secure authentication and authorization systems** using JWT and role-based access control (RBAC), ensuring safe multi-user interactions across platforms.
9. Integrated **observability and monitoring mechanisms**, including structured logging, health checks, and debugging workflows to maintain reliability in production environments.
10. Designed the system with **horizontal scalability and Kubernetes readiness**, enabling future transition to distributed, large-scale deployments.

Bhuvnesh Verma

Schedula - Event Management & Ticketing App [[Github](#)]

May 2025 - June 2025

1. **Architected** a full-stack event management application using Expo, Supabase, and a custom Node.js backend, featuring real-time event discovery, one-tap registration, and a dynamic multi-theme UI.
2. **Engineered** a secure digital ticketing system, leveraging a dedicated Node.js server for JWT-protected QR code generation and an in-app scanner for real-time, role-based admin check-in and validation.
3. **Established** a robust user management system using Clerk for Google OAuth, automating user data persistence with Supabase and implementing distinct permissions for admin and user roles.
4. **Automated** the full development lifecycle with a CI/CD pipeline using GitHub Actions and EAS, deploying a scalable backend on Render with cron jobs for service health monitoring and intelligent storage optimization.

Morph57 - AI-Powered LaTeX CV Builder [[Github](#)] [[Website](#)]

April 2026 - Present

1. **Developed** an AI-driven resume generation platform that converts job descriptions into ATS-optimized LaTeX resumes tailored to specific roles.
2. **Engineered** a structured content generation pipeline for clean formatting, section prioritization, and role-specific customization.
3. **Built** a responsive frontend enabling real-time preview and editing of generated resumes.
4. **Focused** on automation and personalization, significantly reducing the time required to create high-quality, job-ready resumes.

OverDrive - DevOps Automation & Deployment Platform [[Github](#)] [[Website](#)]

March 2026 - Present

1. **Architected** a zero-config deployment platform that automatically detects application stacks (Node.js, Flask, Next.js) from GitHub repositories and generates optimized Dockerfiles for containerization.
2. **Engineered** an intelligent CI/CD automation system that dynamically configures GitHub Actions pipelines, enabling seamless build, test, and deployment workflows without manual setup.
3. **Designed** a self-healing debugging mechanism that identifies runtime and configuration issues, generates automated pull requests with fixes, and provides actionable error insights to developers.
4. **Built** a scalable backend system focused on developer productivity, enabling one-click production deployments and reducing operational overhead.

Node - Multi-User Group Collaboration System [[Github](#)]

April 2026 - Present

1. **Architected** a backend-driven collaboration platform enabling users to create, manage, and participate in multi-role groups.
2. **Implemented** role-based access control (Owner, Leader, Member) with fine-grained permission handling.
3. **Engineered** a comprehensive activity logging system to ensure transparency and traceability of user actions.
4. **Built** using Node.js and SQL-based architecture, focusing on scalability, data integrity, and controlled collaboration workflows.

EXTRA CURRICULAR ACTIVITIES

1. **Organized** and led a web development workshop for **200+ participants**, delivering sessions from **core fundamentals** to hands-on implementation.
2. Designed, developed, and deployed **4 dynamic websites** for GDG Campus events, **streamlining workflows** and **reducing manual workload** by **40%**.
3. Conducted an **Android development seminar**, showcasing **Expo** framework and API integration, enabling **100+ attendees** to understand **app architecture** and real-time data flow.
4. **Active member** of **GDG RBU Campus**, contributing to technical events and community growth.

TECHSKILL

Web : JavaScript, TypeScript, React, Next.js, Vite, Tailwind CSS, Redux, TanStack Query

App : React Native, Expo, EAS CLI, NativeWind, Zustand, LogRocket, Sentry

Backend : Node.js, Bun, Express.js, Flask, Redis ,Microservices

Languages : JavaScript, TypeScript, Python, Java, C, C++, SQL

Databases & ORMs : MongoDB, PostgreSQL, MySQL, SQLite, Supabase, Firebase, Prisma, Drizzle

Auth / Infra : Clerk, OAuth, Firebase Auth, Supabase Auth, JWT, Docker, GitHub Actions, CI/CD

DevOps & Cloud: Docker, Kubernetes, AWS (EC2, S3, ECS,etc), Terraform, CI/CD, Grafana, Prometheus

Utilities : ESLint, Sentry, Ngrok, Uploadcare
